Chamano Ramashia

Software Developer

I'm a self-taught developer with at least 2 years of experience in product development. I am self driven and truly believer in continued education and research to seek new software and methods to assist with product development. I'm not afraid to ask for help when i get stuck and i don't always wait to be told what to do rather i find problems to solve. I understand the importance of time management and open communication. While it may be easy to focus on the technical side of work, I've found that being able to express concerns, roadblocks, and alternative solutions to colleagues of varying technical backgrounds is invaluable in a professional environment. I enjoy being challenged and engaging with projects that require me to work outside my comfort and knowledge set.
